SSC
N.K.E.S. , Navi Mumbai, Maharashtra
06/2013 - 03/2018   *77.2 %*

PROJECTS

5 Miles (06/2024 - Present)
- It is a project involving development of a website and a mobile application. This project is specifically planned for buying and selling stuff locally, using the website and the mobile application. For these, two teams have been created. First, for development of the website and the other for creation of the Mobile application. The website team uses tools like Html, Css and Javascript for development.
- I have took the responsibility for development of the mobile application. For these, i use flutter, which is a open source framework created by google. For graphics, it uses skia graphics engine, which is known for its high performance 2d graphics.
- This projects aims to create a stable and reliable environment for local sellers and the interested customers for buying and selling stuff through the use of image, video and location.
- The project aims to achieve its targets by creation of APIs through javascript for website.
- For mobile application, the user interface is created through implementation of skia graphics engine with the inbuilt widgets of flutter.
- The project targets to use APIs for proper functioning and transfer of data.
